

## The Problem

Products such as Skype and FaceTime are great for simple one-to-one or small group conversations. However when you want to have the same capabilities seamlessly integrated into your own application, these will not work. You need the functionality of Skype, but tied seamlessly into your application.

## The Solution

WebSync and IceLink are SDKs that you can incorporate into your application your way. Using WebSync for chat and signaling and IceLink for media transmission, you can add both chat and video conferencing into any application.

Already have your own signaling, such as SIP? No problem, IceLink works with that too. By making use of WebSync and IceLink event triggers and quality feedback, you can create applications that adjust to environmental factors to provide custom and unique user experiences. WebSync and IceLink provide the basic functionality you need. Your application provides the user interface and is the driver for the chat, signaling, browser synchronization, whiteboarding, audio/video transfer and file transfer capabilities provided by WebSync, IceLink and the IceLink Servers.

## Expert iRTC Application Design and Development

Frozen Mountain specializes in the development of Internet-based Real Time Communications (iRTC) web and mobile applications based on the latest technology and covering a wide variety of platforms. We provide services at multiple levels, including RTC architecture design, third party product integration and RTC application development.

As the developers of IceLink, our native WebRTC stack we developed ourselves, we know real-time communications. Whether you are just getting started with a great idea, or are looking to breathe new life into an existing application, we have the RTC expertise necessary to get you where you want to be. No matter what your need, budget or deadlines require, our team of expert software consultants can help you.

# Areas of Experience

## Technologies & Standards

WebRTC including STUN/TURN/ICE, Media Streaming, Call Signaling (WebSync or SIP), HTTP Push, Bayeux, WebSockets/Long-Polling, Media Streaming, Peer-to-Peer, Client/Server

## Platforms

Window, Mac, Linux, iOS, Android, Windows Phone, Chrome, Firefox, IE, Edge, Safari, Opera

## Frameworks

.NET, Java, PHP, ExtJS, jQuery, MVC, Entity Framework, Xamarin, Mono, Objective C

## Servers

IIS, Apache, SQL Server, MySQL

## Integrations

Wowza, FreeSWITCH

### HAVE AN IDEA FOR A NEW RTC APP?

Or need to renovate an existing web or mobile application? Contact our talented professional services team today for a consultation.
