

Real-Time Communication

APPLICATION DESIGN & DEVELOPMENT

The Problem

You have a need, or a great idea, for a new real-time communications web, mobile or native application, but lack the resources in either time or development staff to produce it. From napkin sketch to fully mapped out, we can assist at any stage of the development cycle to make sure you end up with an application that meets all your needs.

The Solution

As industry leaders in Real Time Communications web, mobile and native application design and development, we can make your application ideas a reality. Our dedicated Professional Services team provides app architecture, design, development and consulting for our 300+ clients worldwide across a wide range of industries covering all aspects of RTC including A/V streaming, text chat, screensharing, signaling and broadcasting.

As the developers of IceLink, a WebRTC stack that we developed from the ground up without the use of third party code, we know real-time communications. We have the best developers and consultants in the RTC industry, and we are happy to share some of that talent with you. Whether you are just getting started with a great idea, or looking to breathe new life into an existing application, we have the RTC expertise necessary to get you where you want to be. No matter what your need, budget or deadlines require, our team of expert software consultants can help you.
